LOYD E. WILLIAMS
PIPE TRADES TRAINING CENTER
San Jose, CA

HVACR

The HVACR Service Technician is responsible for the service, repair, installation and retrofit of all types of refrigeration equipment, from the smallest air conditioning systems to the air conditioning and refrigeration units used in hospitals, skyscrapers, research and development laboratories, supermarkets and other complex installations.

STEAMFITTING- PIPEFITTING

The Steamfitter protects our environment by properly installing piping and equipment for complex heating/air conditioning and special industrial piping systems such as semiconductor, biotechnology, and power generation.

PLUMBING

The Plumber protects the health and safety of the community by providing pure water to residential, commercial and industrial building for drinking, cooking, washing, cleaning, manufacturing or personal use, by removing wastewater after it has served its purpose.
